

Russell Dudek

Senior Product Manager, Agentic AI candidate | Operator-technologist | AI product systems

Operator-technologist who turns emerging technology into adopted, measurable operating systems. Experience spans AI and automation advisory, production and customer operations, high-reliability engineering, digital workflows, technical translation, and customer-backward mechanisms. Builds shared models that connect product intent, tool behavior, human judgment, evidence, economics, and ownership.

Jerry role thesis: Scale the behavior, not the prompt.

Unify distributed prompt logic through a versioned Agent Behavior Manifest covering customer promise, intent, tool authority, human authority, evaluation, cost/latency, release ownership, and learning.

ROLE-ALIGNED CAPABILITIES

Agent product systems

LLM workflows, RAG, agents, structured context, human-in-the-loop, escalation, evaluation, guardrails, and governance.

Technical product translation

Converts strategic goals and frontline realities into workflows, APIs, decision rules, operating standards, and measurable rollout mechanisms.

Data and experimentation

SQL-fluent hypothesis framing, scorecards, failure classification, root cause, controlled pilots, and continuous-learning mechanisms.

SELECTED EXPERIENCE

Vape-Jet | Director of Operations

2025-present

AI-first operating transformation for a robotics and automation company

- Lead cross-functional operating systems spanning production, purchasing, quality, customer success, support, engineering issues, Odoo, Jira, HubSpot, Slack, telemetry, and AI-enabled workflows.
- Connect field, customer, support, quality, and engineering evidence across approximately 1,000 fielded robots to improve visibility, ownership, escalation, and learning.
- Translate technical constraints and operational failure modes into standard work, decision rights, feedback loops, and scalable adoption mechanisms.
- Build practical AI workflows that augment judgment and execution rather than decorating existing processes with AI terminology.

DudeWorth | Founder / AI and Automation Advisor

2017-present

AI opportunity, readiness, workflow, and governance systems

- Develop AI-readiness and opportunity frameworks that move teams from vague ambition to prioritized use cases, operating requirements, adoption plans, and measurable outcomes.
- Design agentic workflow patterns using structured context, retrieval, specialized agents, human review, escalation, evaluation, and governance.
- Build and prototype AI-enabled tools, calculators, Kanban systems, decision models, and product concepts across customer, operational, and technical use cases.
- Continuously evaluate new model capabilities and convert them into bounded, testable workflows with explicit tradeoffs and human authority.

Amazon | Operations Management / Site Leader

2014-2018

Customer-backward mechanisms in a high-velocity 24/7 network

- Launched and operated Amazon Prime capabilities in Pittsburgh using Lean, Six Sigma, Gemba, standard work, escalation, and customer-backward decision mechanisms.
- Supported an operation responsible for approximately five million second-day orders annually while aligning frontline execution, service quality, staffing, and continuous improvement.
- Contributed to logistics innovation through Amazon Flex geolocation concepts connecting customer experience, field execution, and operational confirmation.

Compunetics | Director of Operations and Engineering Management

2000-2013

High-reliability engineering, manufacturing, quality, and technical liaison work

- Led complex-electronics operations using quality systems, process controls, root-cause practice, and technical communication.
- Served as technical liaison for advanced-materials and electronics work involving Intel, AMD, PPG, CERN, and mission-critical government programs.
- Published industry articles, delivered technical talks, and contributed to the HyperTransport Consortium.

Russell Dudek

Evidence, technical foundation, and leadership range

ADDITIONAL EXPERIENCE

Cardinal Building Products | Regional Director

2021-2023

Distributed operations, CRM, fulfillment, and stakeholder alignment

- Built the company's first remote regional operation and connected customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO, and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts while coordinating distributed customer and operating needs.

ZeusVu | Chief Pilot, Autonomous Systems and Aerial Data Operations

2018-2022

Regulated drone operations, computer vision concepts, and physical-world data

- Developed TensorFlow-based concepts for automated aerial inventory and computer-vision-enabled field intelligence using drones, orthomosaics, and ground-truth positioning.
- Led regulated drone operations across medical, energy, logistics, real-estate, and restricted-airspace contexts with a 100% safety record and no FAA incidents.

SELECTED OPERATING MECHANISMS

Change-to-release governance

Evidence: Vape-Jet and Compunetics. Classify failure, bind an owner, define the evidence standard, and make rollback possible.

Customer-backward mechanisms

Evidence: Amazon and Cardinal Building Products. Connect product intent to frontline reality, fulfillment, customer experience, and operating constraints.

Human authority and escalation

Evidence: DudeWorth and operational leadership. Make handoff triggers, decision rights, context transfer, and exception ownership explicit.

Physical-world AI feedback

Evidence: Vape-Jet and ZeusVu. Combine telemetry, computer-vision concepts, field signals, and human judgment into a measurable learning loop.

CREDENTIALS

- Google AI Essentials
- IBM Enterprise Design Thinking Practitioner
- Six Sigma Certification
- OSHA 10

WHY THIS EVIDENCE FITS JERRY'S MANDATE

From fragmentation to a product system

Repeated experience connecting siloed systems, frontline evidence, technical teams, customer outcomes, and decision rights into one operating model.

From model capability to reliable work

Practical AI focus on context, tools, human judgment, evaluation, escalation, governance, and measurable outcomes.

From experiment to adoption

Mechanism-building across high-velocity operations, high-reliability engineering, robotics, regulated workflows, and distributed teams.

From technical detail to executive clarity

Longstanding role as translator among engineers, operators, customers, leadership, and external technical stakeholders.

Relocation and hiring jurisdiction

Currently based in Pittsburgh and actively relocating to the Tampa Bay area. Prepared to establish Florida residency and confirm timing directly with Jerry's recruiting team; this document does not claim current Florida residency.
